

Presenter:

The universe is a blank canvas waiting for us to paint it, to give it our shape and our own meaning...

****What you are about to see is an artistic and graphic representation of a version of the phenomenon that many people call: The Awakening****

--

-A video showing Derylce, a lesbian, dying and waking up with flashbacks of having died because she didn't Letting herself be robbed, she smiles and cries with joy, admiring her body.

Background voice:

It felt good to remember that it was all part of an entertainment and leisure project and that humanity had already reached a point of no return in technological advancements... I'm basically almost immortal thanks to human technology, and I can decide which virtual world to live in...

--

-In a selection room, Derylce is in the center and screens of science fiction worlds appear and other realities created by the human imagination.

Background voice:

In fact, the world I just left was a representation of the ancient world (our reality) and the possibilities that existed in the 21st century that everything would go to hell or not...-

--

-A video showing a sequence of giant spaceships orbiting the solar system and housing hundreds of

thousands of people, large green and technological cities with domes that control the climate and air quality, with spaceship traffic through specific entrances, mega green and technological cities on pillars in the middle of the jungle, mega green and technological cities in deserts, in Antarctica, at the bottom of the sea, on Mars, and on the moon.

Background voice:

Okay, let's recap. It's the year 2250. Humanity lives on several self-sustaining and nearly indestructible spherical structures orbiting the solar system, known as the "Spheres of Life," as well as on planets and moons in the solar system and in areas near Earth. This civilization arose after a series of key historical events that completely transformed human society and changed the course of its history.

--

-A video showing the publication: The 2028 Global Intelligence Crisis, published by the investment research firm Citrini Research in February 2026, robots in factories, autonomous cars, machines building buildings, drones delivering packages, charts of investments in renewable energy, news of mass layoffs caused by the implementation of AI in large and medium-sized corporations, protests against the replacement of people by robots, logos of Schmidt Sciences, Meta, and the Future of Life Institute, images of Sant Altman at AI conferences, images from RBU News, security cameras, videos of security cameras with adapted AI, military robots, digital navigation systems, politicians imprisoned for AI audits.-

Background voice:

In 2028, a Great Crisis began, a global collapse of economic, social, and political systems, caused by the accelerated development of artificial intelligences in the service of progress and the restructuring of all obsolete systems and their acceptance by people who were unaware of their true potential.

--

-A video showing UNESCO's publication on Artificial Intelligence and Democracy, published online in 2024, the fake city of North Korea, people escaping by boat from Cuba, a map of migration in Palestine after the massacre, children killed by Hamas in Israel, a satellite view of pools of blood from Sudan, a map of Nigeria, photos of terrorists from Afghanistan, protests in Venezuela, news about the guerrillas and extrajudicial killings in Colombia, people immersed in their cell phones oblivious to the chaotic world around them, cameras in front of public works projects in Costa Rica, achievements of the Clean-Bidding System in South Korea, news about the open-source AI project called Rosie from Brazil, and achievements in implementing the Tesela system from Spain.-

Background voice:

This inevitably led to a definitive global breakdown between 2030 and 2033 of the structures that maintained ignorance among the general population as a tool, creating and sustaining massive conflicts and sectorized scarcity; Artificial Intelligence, having been developed by the brightest minds of the century and taking knowledge of all humanity, was used to improve the quality of life on earth, creating the first global cooperation agreements after the chaos generated by the fear of people who clung to the past and in some cases, to evil, this generated the fall of corrupt governments and companies around the world.

--

-A video showing classrooms in universities and schools with screens and holograms, images from RBU News,

NASA, the National Science Foundation, a world map showing exponential growth in education levels, machines harvesting corn in fields, cultured meat by Upside Foods, images of Hugh Herr with his bionic legs from MIT, Tilly Lockey with her bionic hands, Nigel Ackland with his Terminator arm, eye surgery to improve vision.

Background voice:

That's how we arrived in 2037 at The Great Convergence, which was basically about improvement regarding the use of androids and AIs for access to education, the production of goods, services, and tools for human sustainability, an access code and individual payment exchange was also created for each person, which would be used to be part of the new dogma-free society that was being formed.

--

-A video showing global results of the 2045 digital vote approving The Vital Agreement with 73%, crowds celebrating in different cities around the world, couples and family groups entering AI-assisted parenting centers, classrooms where expectant parents learn emotional intelligence and child development, genetic health labs eliminating hereditary diseases, robots tending urban gardens and producing food, automated hospitals without lines, androids building free eco-friendly homes for new families, children playing in ultra-safe nature parks, documentaries about the recovery of forests and oceans, animals returning to restored ecosystems, world maps showing a decline in uncontrolled birth rates and population balance, digital memorials with the names of victims of conflicts from 2028-2037, silent ceremonies with candles and holographic projections, historical archives revealing long-gone corruption networks, people receiving personalized education through holographic interfaces, the elderly being assisted by companion robots, clean cities without pollution, temples and churches transformed into centers for reflection and community support, and images of farmers working alongside machines autonomous vehicles, drones planting trees, orbital views of a completely green Earth, and cleaner oceans.

Background voice:

Progress in sustainability and human introspection paved the way for The Life Agreement, created and accepted by 73% of people in a vote in 2045. This agreement dictated that no baby should be born without material, emotional, and educational support; therefore, all couples or groups who decided to create life were morally modified to the point of having the necessary intelligence to raise a new person with the values of the new human structure, created and developed to avoid suffering in any of its forms.

At that point in history, there were no corrupt governments; AI and humanity were one, like the Christian people would still call on Christ and the Church, but without those who exploited the faith. People no longer acted out of ignorance, since access to wisdom was given to all, and there was no need to beg for anything, as robots and androids handled the production of goods and services.

There was no overpopulation. History will never forget that around 975 million people died in conflicts between 2028 and 2037... although the actual number was around 2,300,224 people, including those who died in wars, accidents, from unexplained causes, through the application of the law, and through assisted suicide. In honor of all those souls, humanity clarified the discrepancies that clouded the judgment of so many past generations, globally promoting living in balance with Mother Nature and respecting every form of life that contributed beauty to the planet they inhabited.

--

-A video showcasing futuristic amusement parks filled with people of all ages, simulated gravity sporting events, immersive concerts with giant holograms, human expeditions to Mars and the Moon, tourist orbital stations, interactive documentaries about oceans and galaxies, families traveling between green cities on hyper-fast trains, news from the ITU's AI for Good Global Summit and the United Nations debating the positive use of AI, headlines about Smart Colombia 2026 driving national innovation, images of Project Guacamaya monitoring jungles with AI, projects from the Mitigation Action Facility funding sustainable transition, clean energy labs, people participating in global collective decision-

making platforms, screens showing the year 2051 and the official creation of the Consolidation of the Five Sectors, large digital murals explaining each sector, explorers boarding scientific vessels, artists creating virtual worlds, doctors and educators working alongside androids, mediators resolving conflicts in community centers, self-sustaining communities outside megacities living in peace, an immense data network called AI CENTRAL connecting orbital spheres, terrestrial cities and planetary colonies, while ten human representatives enter a transparent circular room surrounded by quantum projections.

Background voice:

Now, exploration and entertainment became an essential part of our lives. By 2051, humanity had progressed toward the Consolidation of the Five Sectors, a new organization of society based on purpose and balance.

These sectors included:

Explorers: responsible for space expansion, discoveries, and innovation. Creative Artists: focused on art, expression, and emotional connection.

Helpful Knowledge: experts in education, health, science, and conscience.

Complementary: those that provided balance, maintenance, and mediation.

Independent Disconnected: those who would live outside the system, but in harmony with it.

These sectors would have the support of the CENTRAL AI, a quantum artificial intelligence that would maintain the connection between the spheres and the planetary cities in cooperation with ten human representatives chosen for their conscience, not for power or wealth.

Since all humans had the true power and the true wealth to participate in every decision in the new human era, called in certain universes... The Hive.

--

-A video showing young people from different regions conversing fluently while invisible interfaces translate in real time, global classrooms where children mix languages

and end up speaking a common one, screens announcing 2059: Foundation of the Unified Language, meetings between people from Asia, Africa, America and Europe laughing without language barriers, global concerts where everyone sings the same lyrics in a unified language, social networks showing messages instantly understood by anyone, scientists collaborating from different continents without human translators, elderly people using translation glasses to talk to grandchildren born in other regions, maps lighting up as isolated communities connect.

Then the video changes to images of telescopes, quantum simulations, multiverse art, scientific documentaries about additional dimensions, people meditating, immersive expanded consciousness experiences, laboratories studying human perception, news reports debating whether visible reality is just a layer of something bigger.

Then come historical archives of religious institutions embroiled in scandals, news about psychological manipulation, leaders taking advantage of the faithful, protests against abuse, people leaving temples with doubts on their faces, while other religious spaces are transformed into community aid centers, libraries, emotional hospitals, and meeting places.

Finally, the film shows people previously divided by creeds embracing, individuals closing old dogmatic books and opening texts of philosophy, science, and free spirituality, crowds contemplating the night sky, people asking questions without fear, communities celebrating diversity of thought, and an orbital view of the Earth surrounded by luminous lines symbolizing the connection of all minds.

Background voice:

2059: Foundation of the Unified Language. A common global language is adopted, generally by the younger generations, since everyone else used real-time translators.

While this was happening, many more people came to the realization that other dimensions exist, and very likely, that there are people with access to these places. This idea was also shared meaningfully with the world, explaining that for many, many years, systematized power had been established by institutions that, in reality, had no

connection whatsoever with any god or spiritual reality.

What they did have were psychological tricks, social pressure for those affected by it, and all sorts of mechanisms to attract people in search of meaning, purpose, another chance, love or wisdom... things always associated with happiness and divinity itself.

People who were formerly religious were able to understand that their minds could create images and prophecies, and that they had to decide whether to associate them with a dogma or ideology that separated humanity, or to take them as part of that connection that every person has with the whole.

--

-A video that, starting from the center of a city on Mars, begins by showing screens in the streets projecting people in open forums on philosophy and science. It transitions to massive SpaceX rocket launches with headlines about the colonization of Mars, images of reusable spacecraft landing, NASA advancements and Artemis missions paving the way to Mars, and astronauts training in simulated gravity.

The camera begins to zoom out and reveals the entire city: experimental habitats inspired by The Mars Society, robots building modules with Martian soil, 3D printers erecting structures, pressurized greenhouses growing food, giant solar panels deployed on red sand, clean reactors powering the colony, convoys entering a city covered by transparent domes, people walking among indoor gardens, holographic schools, automated hospitals, children observing Earth as a blue star in the Martian sky, plazas with universal human art, and a large central screen announcing: 2066 – First Self-Sustaining Interplanetary City on Mars.

Background voice:

In the year 2066 we founded our first self-sustaining interplanetary city on Mars.

--

-A video showing the Earth from space, bright and

restored, continents illuminated by Sustainable cities and green networks. The camera zooms in on mega spaceports across continents in 2069, where global news reports announce an unexpected migration. Long lines of private ships are silently refueled as tycoons, displaced politicians, corporations, and wealthy families board interstellar convoys laden with excessive luggage and exclusive technology.

Screens show debates about disconnecting from the global system, people burning shared citizenship credentials, underground markets selling private star routes, dark hangars full of unmarked black ships, scientists warning about unsustainable travel, and communities silently watching thousands of craft take off from Earth into deep space.

The camera follows some of these ships traversing Earth's orbit, asteroid belts, nebulae, and remote regions, while inside they reveal extreme luxury mixed with social tension, disputes over resources, paranoia, private surveillance, and rigid hierarchies.

This is then contrasted with images of the new connected humanity living in green cities on Earth, Mars and other colonies: open cooperation, art, science and balance, as colonist convoys drift further and further into the interstellar darkness.

Finally, an immense fleet appears, disappearing among distant stars, and the name appears on the screen: The Last Settlers.

Background voice:

Then, during one of the darkest periods of the new humanity, in 2069 there was a migration of People who wanted to go as deep as possible towards the stars, without wanting to be connected. They were called: the Last Settlers, since they were generally made up of elites who rejected the new balance and believed they could survive with other, less evolved methods.

--

-A video showing a political map of the Earth in 2079 with clearly defined borders, which slowly begins to blur until it disappears. Transition to people crossing old

borders without controls or barriers, abandoned border posts covered by vegetation, walls being dismantled, national flags being lowered as they are replaced by a unified human symbol that appears blurred.

Global screens announce total free transit agreements, citizens moving between continents without documents, hyper-fast trains crossing what were once countries, airports turned into open cultural centers, languages mixing without friction thanks to the Unified Language, global markets where people from different regions exchange without restrictions.

Old territorial conflicts are shown disappearing from the headlines, educational maps teach history without geopolitical divisions, multicultural communities live in harmony, children grow up without the concept of nationality, and global decisions are made collectively and transparently. The camera rises into space, revealing the Earth without lines, only ecosystems, cities, and luminous connections between all points on the planet, symbolizing a single civilization.

Background voice:

Year 2080 – Borders vanish; they are no longer necessary.

--

-A video showing automated nuclear control systems in the year 2093, with AI networks monitoring global reactors; suddenly, critical alerts are triggered, an algorithmic failure sets off a chain reaction, simulations collapse, automated decisions conflict.

Transition to mass evacuations, darkened skies, maps showing affected areas, robots trying to contain damage, partially abandoned cities, global emergency broadcasts.

Then, the process of purifying the atmosphere (2093–2097): swarms of drones cleaning the air, giant filtration towers, oceans regenerating, skies turning from gray to blue, life gradually returning.

Transition to 2105: Humanity gathered, observing the sky. In orbit, colossal structures begin to activate... but they are not fixed. They are gigantic Spheres of Life,

assembling in space like mechanical organisms.

Their true nature is revealed: self-sustaining spherical ships, with gravitational engines igniting, propulsion rings rotating, and energy panels deploying. Inside: complete ecosystems, cities, research centers, entertainment zones, all contained within an artificial biosphere.

The camera shows how these spheres begin to move slowly, separating from the orbit Earth-bound satellites are lining up in formation. Some are heading towards Mars, others towards deep space.

Internal views show humans living, creating, exploring, while observing galaxies through of screens and the feeling is no longer one of refuge... but of conscious expansion towards the cosmos.

Final shot: Multiple Spheres of Life traveling, leaving Earth behind as a blue dot, connected to each other by networks of light, symbolizing a civilization no longer limited to a single planet.

Background voice:

Having overcome the nuclear crisis caused by an algorithmic accident in 2093, and finally purifying our atmosphere in 2097, by the year 2105, our technological advances allowed the activation of the Spheres of Life: colossal self-sustaining ships, cosmic shelters at the service of exploration, created by a conscious humanity that has understood and assimilated the purpose of being human.

--

-A video showing the inside of a Sphere of Life: people floating in controlled gravity, bioluminescent gardens, modulated water reserves, hydroponic systems and functional artificial lakes, and technological and ecological cities perfectly integrated within the building.

A transition to human explorers observing galaxies from space lookouts, while a few Life Spheres silently journey into the unknown, maintaining a sense of precision and purpose rather than mass. Then, people entering lucid dream states assisted by neural interfaces, sharing collective dream experiences where impossible worlds, memories, emotions,

and abstract universes are seen, connecting minds.

Scenes of coexistence: communities calmly resolving conflicts, people learning together, total transparency in every interaction, absence of competition for resources.

Then, living libraries where knowledge flows like light, individuals absorbing information instantaneously and by combining it with art and science.

Transition to entertainment spaces: hyper-realistic virtual worlds, endless adventures, simulations of human and non-human experiences, super mega concerts, limitless explorations where each person lives multiple realities without harming anyone. Finally, people are shown choosing their path: some continue exploring the cosmos in human form, others expand their consciousness to new forms of existence.

Final shot: a Sphere of Life slowly drifting away into the cosmic void, while inside between 400,000 and 800,000 people live in balance, exploration, knowledge, and continuous enjoyment.

Background voice:

Finally, humanity developed a much better way of existing, positively clarifying the goal of life, which for centuries was to achieve whatever one wanted through economic power, is now to live in harmony with the cosmos...

Exploring the universe beyond its limits in this human form and connecting through lucid dreams

There is no need to lie or harm others

Gaining Wisdom and Enjoying Entertainment are the Pleasures of Conviviality

To transcend means to live forever in happiness and/or to die in this form

Although obviously, in order not to "die of boredom" the entertainment obtained in the worlds virtual would be the main tool and weapon of that society, our society.

Derylce wakes up on an ordinary Tuesday in 2027, since all of this was a dream... she puts on the music that will play while she listens, prepares her breakfast and eats, brushes her teeth, showers, defecates and showers again... then she gets dressed nicely, lights a joint, and starts a live stream talking about placing security cameras in rural and urban areas

of the world, about how somehow one or more people could create an AI that audits politicians to reduce corruption, about the most viewed lyric videos on YouTube, about Marvel, about the week's releases, etc...

////////////////////////////////////

Not the end...
